                                                                                                                            This compound represents a glycopeptide effective in inhibiting the CC binding of labelled mannosylated BSA to mannose receptors. Mannose CC receptors are uniquely found on macrophages and not on monocytes. CC Glycopeptides such as this provide a mechanism to trayet macrophages. CC specifically, to image, label, destroy or otherwise alter their CC antigen processing function. In addition they can be conjugated to CC solid supports and used to purify mannose receptors from a variety CC of sources. They are useful in the treatment of inflammatory CC diseases driven by macrophage secretory products eg. Crohn's CC disease; infectious diseases in which macrophages harbour replicating CC infectious agents eg. Legionnaires disease; viral infections CC disease; in which macrophages harbour replicating CC involving mononuclear phagocytes eg. HIV and lysosomal storage CC involving mononuclear phagocytes eg. HIV and lysosomal storage CC diseases, in which macrophages are principally involved eg. CC daucher's disease; asthma mediated by alveolar macrophages, and in CC controlling metastasis, mediated by systemic macrophages, and cC can also be used to deliver antigenic peptides as conjugates to a CC macrophage to marchal an immune response; also self peptides to CC prevent tissue transplant rejection.

                                                                                                                                                                                                                                                                S
                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to the genome sequence of Listeria monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of the result of the sequence and fragments of the result of the sequence and primers for detecting genes in L. monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein encoded by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and for biosynthesis and biodegradation, especially biosynthesis of vitamin B12. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes-related diseases. In addition, the genome sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by L.
                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                          monocytogenes and related organisms.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The resulting plasmids encode fusion proteins CC consisting of beta-glucuronidase, Protein A, and rCOP-1 sequences.

CC A methionine residue occurs between the Protein A and rCOP-1 genences, originating from the 5' linker sequence, in order that the COP-1 polypeptide may be cleaved from the fusion protein. CC rCOP-1-77 contains oligonucleotide duplexes incoding the following Cr rCOP-1-77 contains oligonucleotide duplexes

                                                                                                                                                                                                                      AAY34055
                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention provides heat-killed Mycobacterium vaccae, or recombinant CC M. vaccae proteins. The M. vaccae proteins may be employed to activate T cells and natural killer cells, to stimulate the production of CC cytckines, to enhance the expression of co-stimulatory molecules on CC dendritic cells and monocytes, and to enhance dendritic cell maturation and function. The proteins can be expressed by standard recombinant CC methodology. Pharmaceutical compositions comprising the proteins or nucleic acid sequences encoding the proteins can be used for the CC treatment, prevention, and detection of disorders including infectious CC diseases, immune disorders and cancer. In particular, the compounds and CC methods are used for treatment of diseases of the respiratory system, compensation as mycobacterial infections, asthma, allergies, tuberculosis, CC leprosy, sarcoidosis and lung cancers, and disorders of the skin such as psoriasis, atopic dermatitis, eczema, allergic contact dermatitis, allegations areata, and skin cancers such as basal carcinoma, squamous cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention provides a method for the diagnosis, prevention and cc treatment of ulcerative coiltis (UC) using histone H1-like antigen. A CC porin antigen or a Bacteroides antigen as a target antigen. The novel comethod of diagnosing UC in a subject suspected of having inflammatory bowel disease (IBD) comprises: (1) obtaining a sample from the subject; CC (2) contacting the sample with a histone H1-like antigen, or perinuclear CC anti-neutrophil cytoplasmic antibody (pANCA)-reactive fragment, to form a CC complex of the histone H1-like antigen, or the pANCA-reactive fragment, CC and antibody to the histone H1-like antigen; and (3) detecting the CC presence or absence of the complex, where the presence of the complex CC indicates that the subject has UC. The pANCA-reactive histone H1-like antigen, porin antigen and Bacteroides antigen are useful in the CC diagnosis, prevention and treatment of UC. The methods can also be used CC for identifying agents useful for treating UC. The present sequence CC represents a M. tuberculosis histone H1-like antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention provides a method for diagnosing ulcerative colitis in a subject suspected of having inflammatory bowel disease. The method comprises reacting a patient sample with a porin antigen that is immunologically reactive with pANCA (perinuclear anti-neutrophil cytoplasmic antibodies) and detecting formation of a Ag-pANCA complex as indicative of ulcerative colitis. The method is used to diagnose ulcerative colitis or susceptibility to it. The present sequence represents a histone H1-like protein of M. tuberculosis, designated 214.
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques
                                                                                                                                                                                                                                                                                                                                 31-MAR-2000;

(II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polymucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity CC and to produce other types of data and products dependent on DNA and CC diagnostic amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences this patent did not appear in the printed CC specification, but was obtained in electronic format directly from WIPO

Database

score greater than

No. is the number of results predicted by chance to have a greater than or equal to the score of the result being priderived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     B B
